

Security Audit Certificate

SAFE HAVEN

Red4Sec Cybersecurity Services, certifies that a security audit has been carried out on **Safe Haven**, the technical team has examined the security level status of the Safe Haven Smart Contracts. The overall impression about code quality, organization and of the Safe Haven's team is admirable.

All the phases of the project have been analyzed during the audit, with focus and special emphasis on all the points that may present a risk to the integrity and reliability of the Smart Contracts of Safe Haven. The action plan to fix the found issues was promptly and effectively executed by Safe Haven's technical team. The recommendations to improve the project source code and ecosystem were also successfully applied.

The last audit review was conducted on the **09/15/2020** consisting on a comprehensive and thorough analysis of the scope mentioned below.

Safe Tech Smart Contracts

- SafeTech – PriceManager and StoreFactory Smart Contracts.
 - https://github.com/SAFETECHio/RED4SEC-Inheriti_Smart_Contracts_Audits

During the analysis, a total of 8 security issues were detected and effectively solved by Safe Haven developers.

Therefore, Red4Sec certifies that all vulnerabilities found during this process have been successfully mitigated by Safe Haven team, all of which have been subsequently verified.

A continuous process was created during the audit in order to improve the security of the project until the optimal state of all the processes involved was verified.

Red4Sec recognizes a great commitment with cybersecurity from Safe Haven team, they always provided a quick and high-quality response to all the recommendations made by Red4Sec.

Accordingly, Safe Haven has successfully included security in the development processes, and we endorse that the project is safer and more stable.
